Summary

In this course, I'm going to teach you everything you need to know to get started programming in Python. Now, Python is one of the most popular programming languages out there. And it's by far one of the most sought after for jobs. And so if you're trying to get a job or you're trying to, you know, automate your life, or you're trying to write awesome scripts to do a bunch of different things, then Python's for you. Honestly, more and more developers every day are moving their projects over to Python because it's such a powerful and it's such an easy to use language.

Questions & Answers

Question:

summarize

Answer:

I couldn't find specific information about your question in the transcript. The transcript doesn't contain details related to your query.
